

Inspiring the next generation

You are invited to a very special event. To celebrate more than 20 years of breaking boundaries in bioengineering, the Auckland Bioengineering Institute (ABI) is hosting a week-long showcase from 9-14 May 2023 at The Cloud on the Auckland waterfront.

We would like to invite Year 9-10 school classes to join us for a memorable interactive experience. Limited spaces - book your spot right away!

Discover the life-changing work of the ABI

The Auckland Bioengineering Institute is a research institute established in 2001 as part of the University of Auckland.

One of our major goals is to enhance the diagnosis and treatment of a range of medical conditions, and to help with improving the lives of people with disabilities or injuries. Our team is working on everything from artificial intelligence avatars, to innovative gadgets and implantable devices, to world-leading 3D models of the human body.

A memorable interactive experience

We want to inspire the next generation and raise awareness for the life-changing research we do. This week-long showcase will feature a mix of interactive displays, artwork exhibitions and seminars - we will connect our current research with STEM subjects taught in schools in an engaging way.

The content will be family-friendly, and entry will be free to schools and the public.
