

September 05<sup>th</sup>, 2022

Prof. Suranga Nanayakkara,  
Department of Information Systems and Analytics,  
School of Computing,  
The National University of Singapore.

Dear Professor,

With this cover letter, I am applying for the Research Engineer position advertised with your University that I found on the NUS careers website. I believe I am a strong candidate for this position as I have the qualifications and experience you are seeking. I am enclosing my resume for your review.

I have strong software engineering experience spreading over the last seven years. Working as a software engineer at my previous software company taught me most of the software engineering practical concepts, client interaction methods, and scrum methodologies. I also have experience in learning and applying new technologies as appropriate. Apart from the software development projects, I've also been involved in many RnD projects and developed software prototypes, IoT solutions, games, and many more.

I have been working as a Research Engineer at the University of Auckland for the last two years of period. There I have been involved in several research projects and developed prototypes for research studies focusing on children's science learning aspects, augmented reality, environmental sensors, and many more.

The attached resume details my projects and experience in both software development and research work. Feel free to contact me anytime via my cell phone, +6583056341, or email at [sankha@ahlab.org](mailto:sankha@ahlab.org).

Thank you for your time and consideration. I look forward to speaking with you about this opportunity.

Sincerely,

(Bulathsinalage Sankha Cooray)

## Sankha Cooray

Software Engineer  
Unity Developer  
XR Developer  
Researcher
