School of Computing,
National University of Singapore.

To Whom It May Concern,

I am writing in reference to **Bulathsinhalage Sankha Cooray** and his job application. I have known Sankha for three years as his colleague and friend. Sankha is a self-motivated individual, and he is passionate about what he does. He likes to innovate and improve what he does continuously through critical and design thinking. In terms of his skills, mobile application development with AR and VR functionalities using various modern platforms emerges at the top. In parallel, he develops software in many languages, such as Java, C#, Angular, and Node JS. He also has much experience working with databases needed for the systems he builds. He usually does everything he needs to do himself and carries experience with many tools and technologies. He has also worked with Arduino, Web Serial API, and cloud technologies such as Firebase and AWS.

Apart from all these, Sankha is a hard worker and gives his full attention to finishing the task at hand, and he always adds something new to the system to further improve it. I strongly recommend Sankha for the Research Engineer position because his skill set and passion match the role perfectly. With the resources and culture in the university environment, he will make significant innovations and bring visibility to the team and the university.

If you require any other additional information, please feel free to contact me at **tharindu@bph200.com** or **+65 9612 6328**

Sincerely,

Tharindu Kaluarachchi
